Specialties

Taking businesses online for over 10 years and designing and developing more than 400 websites and web applications, we are specialized in the following categories. We believe that the success of our business is based on our client-centered business model. You will be working with experienced Internet consultants listening to you and holding your hand through the entire process.

Since its creation in 1998, **Ravian** develops and markets educational technologies which enable the creation, distribution and management of e-Learning training contents. At **Ravian** our mission is special and all-important. We have the challenge of presenting your organization with time and cost-efficient learning opportunities. Along the way, we offer tireless consultation to assist you in making the best decisions to optimize your learning programs.

The professionals at **Ravian** have specialized in bringing e-Learning as a tool to help traditional classroom solutions to corporations, educational and government institutions. We are a leading content provider who presents to you the most effective and widest range of products available. With this robust line, we're able to objectively assess your organization's requirements and select the optimal solution for each individual's needs. Major factors considered include customers' current/future training priorities and initiatives, methods of deployment, "corporate culture", and budget. **Ravian** strives to give learners the power to choose how they receive knowledge. We can offer hundreds of courses, learning objects, and electronic reference tools that can be accessed directly over the Internet, over computer networks and Intranets. Furthermore, we continue to implement new ways to utilize technology to enhance the online learning experience. Your organization's learning requirements are our highest challenge. Our long-standing relationships with clients are testament to the service and quality commitment that we bring to each organization that we work with.

Rayan Saipa Co

Shahed Investment Company

DEFC

Iran Documentary Festival

Established in 1998, **Ravian**, a web development and custom eCommerce company headquartered in Tehran/Iran offers web design, custom web development, and custom eCommerce solutions. By focusing on helping companies create innovative and effective web applications, **Ravian** allows them to generate significant returns on their Internet investment. The **Ravian** Consulting Team is composed of the brightest strategists, and technologists. Our consultants are continuously trained with the latest Internet technologies and e-business strategies. We can guide you through the fast changing world of the Internet technology and provide advice for your company's eCommerce business.

Ravian offers the following Services:

The first thing you need to do is to get together with us to determine your needs and goals. We can do this in person, over the phone, or over the internet using our web conference system. This Consultation typically lasts one to two hours, depending on how much you want out of your website. It's helpful if you and your staff brainstorm before the consultation. You probably already have things that you know you want from the website. However, try to also think of things that frustrate you in your business. We're not saying that a website can solve all your business problems but we can't try unless we know about them.

Ravian offers the following Services :

- . Internet Marketing and Business Development
- . Online Competitive Strategy Development
- . E-Business Cost Saving Analysis
- . E-Business Process Reengineering

E-Business Technology Consulting :

- . Internet Technology Selection
- . Technical Architecture Design
- . Corporate Database Design
- . Online Database Performance Tuning and Enhancement

E-Business Technology Implementation :

- . Custom Application Development based on the Needs (More than simply creating an online shopping cart)
- . Search Engine Optimization
- . Vast Search Engine Submission (Manually and Automatically)
- . Offering PPC (pay per click) Solutions (Based on the Budget)
- . Email marketing Solutions.

What is e-government?

E-Government is the use of Information and Communication Technologies (ICT) for the planning, implementation, and monitoring of government programs, projects, and activities. It can help deliver cost-effective and easy-to-access citizen services, and improve processing of transactions within the government and between government and citizens and government and business.

One of the challenges in delivering e-government services is to design the Web sites to make it easier for citizens to find desired information. However, little work is found to evaluate e-government services in this sense. In addition, current efforts on government Web site design mainly concentrate on Web site features that would enhance its usability, but few of them answers why some Web design is better than others to facilitate citizens' information seeking.

Ravian provides software development services to help clients modernize core systems to the latest web and database standards, for increased agility, scalability, and performance toward Governmental service improvements. In particular, **Ravian** performs software development and enterprise systems integration, specializing in databases (MS-SQL Server), and programming with Microsoft .NET.

Ravian is actively engaged with governments and governmental agencies nation wide to deliver advanced, automated, secure and highest quality solutions to best serve their citizens. In serving governments, **Ravian** adopts innovative approaches to address governments' specific challenges through the optimal use of cutting-edge technologies.

Ravian depends on an engagement management model that encompasses listening to, and understanding, the organizational environment and challenges faced by our customers. We then work in partnership with them to develop client-centric solutions that reap the highest return on their technology investment.

Our E-Government services include :

- . Usability evaluation
- . Information architecture
- . Online surveys
- . Web application development
- . Webpage design with standards compliant HTML/CSS templates
- . E-Government compliant markup/content loading
- . E-Government compliance audit
- . Web maintenance training

Software Distribution:

Ravian is the authorized dealer of two geotechnical software developed by Alireza Afkhami. With a specialized and hard working team in the field of marketing and sales and experts in the tech team Ravian distributes and supports these two applications in Iran. If you are interested in any of them please feel free to get more information at their websites or contact us for a presentation, purchasing or support. If you want to distribute your software in the large market of Iran please see our partnership page.

Peysanj

First version of **Peysanj** was developed in QBasic (1997) to calculate the bearing capacity more quickly and more accurately. After a while the author decided to add the new module of pressure-meter test because this test was getting more popular at the time. So **Peysanj** completely re-written using VB6.0.

In 2004, the software was re-compiled in VB.NET 1.1 and two new modules: "Plate load test" and "Liquefaction evaluation" were added. Finally, in 2006 some parts were upgraded and rewritten in VB.NET 2 with more features. Currently, the latest version of **Peysanj** is **2.35.1021**

Soil Mechanics Test Processor (SMTP)

Using **SMTP** you can quickly and precisely process your soil tests and print the results. Benefiting its features, geotechnical reports look more beautiful and professional. You can create fence diagrams in AutoCAD 2008 as DWG file.

SMTP is so designed that the regular procedure of "project creation", "borehole definition", "samples definition", "data entry of tests" and "reporting" are taken into consideration. The results could be simply used by geotechnical report providers. Now the providers can create fence diagrams in AutoCAD 2008 as DWG file too.
